

### The Table Method

by Sophia

#### WHAT'S COVERED

In this lesson, you will use tables to evaluate limits. Specifically, this lesson will cover:

- 1. Creating a Table of Values to Estimate a Limit
- 2. Using a Table of Values to Estimate a Limit

# 1. Creating a Table of Values to Estimate a Limit

Let's consider again the function  $f(x) = \frac{x^2 - 1}{x - 1}$ . This time though, we can use a table to estimate the value of  $\lim_{x \to 1} \frac{x^2 - 1}{x - 1}$ .

First, we must create the table. To do this, we need to use a sequence of x-values that get closer to 1 from both the left and the right.

From the left, you could use x = 0.9, 0.99, 0.999.

From the right, you could use x = 1.001, 1.01, 1.1.

Now, place the information into one table, also leaving a place for x = 1 as shown below: (Notice the "---" in the place for x = 1. This is because f(x) is undefined there.)

х	0.9	0.99	0.999	1	1.001	1.01	1.1
$f(x) = \frac{x^2 - 1}{x - 1}$							

Now, complete the table by substituting all x-values into the function.

х	0.9	0.99	0.999	1	1.001	1.01	1.1	
---	-----	------	-------	---	-------	------	-----	--

$f(x) = \frac{x^2 - 1}{x - 1}$	1.9	1.99	1.999	 2.001	2.01	2.1

It appears that as x gets closer to 1 from either side, f(x) gets closer to 2.

Thus, we can say  $\lim_{x \to 1} \frac{x^2 - 1}{x - 1} = 2$ , just as we said in the graphing example in the previous part of this challenge.

The following video walks you through the process of evaluating the limit numerically as x approaches -2 of the rational function  $f(x) = \frac{x^3 + 8}{x + 2}$ .

## 2. Using a Table of Values to Estimate a Limit

If a table is already created, we can use the information from the table to estimate the limit.

 $\Leftrightarrow$  EXAMPLE Evaluate  $\lim_{x\to 0} \sqrt{x}$ . Here is a table of values that represent x-values around x=0.

X	-0.1	-0.01	-0.001	0	0.001	0.01	0.1
$f(\mathbf{x}) = \sqrt{\mathbf{x}}$	undef.	undef.	undef.	0	0.03162	0.1	0.31623

From the left side, there is no limit since  $\sqrt{\chi}$  is undefined when  $\chi < 0$ . From the right, it appears as if the limit is 0 since the values of  $\sqrt{\chi}$  are trending toward 0.

Since the left-hand and right-hand sides do not match, we conclude that  $\lim_{x\to 0} \sqrt{x}$  does not exist.

Be sure your calculator is set to *Radians* when creating a table for trigonometric functions like in the example below.

 $\Leftrightarrow$  EXAMPLE Use a table of values to evaluate  $\lim_{x\to 0} \frac{\sin 4x}{x}$ . The table with the values of f(x) is shown below:

Х	-0.1	-0.01	-0.001	0	0.001	0.01	0.1
$f(x) = \frac{\sin 4x}{x}$	3.89418	3.99893	3.99999		3.99999	3.99893	3.89418

It appears as if f(x) is getting closer to 4 from either side. Therefore, we conclude that  $\lim_{x\to 0}\frac{\sin 4x}{x}=4$ .

Consider the function  $\frac{\sqrt{x-2}}{x-4}$ . Answer the following questions to evaluate  $\lim_{x\to 4} \frac{\sqrt{x-2}}{x-4}$ . You wish to use

the following table of values to evaluate the limit.

х	3.9	3.99	3.999	0	4.001	4.01	4.1
$f(x) = \frac{\sqrt{x} - 2}{x - 4}$							

#### Complete the table of values.

 x
 3.9
 3.99
 0
 4.001
 4.01
 4.1

  $f(x) = \frac{\sqrt{x} - 2}{x - 4}$  0.25158
 0.25016
 0.25002
 -- 0.24998
 0.24984
 0.24846

#### What is the limit of the function as it approaches 4?

Based on the table, the best answer we can give is  $\lim_{x \to 4} f(x) = 0.25$ .

### Ż

#### **SUMMARY**

In this lesson, you learned about another method to evaluate limits, by creating a table of values to estimate a limit. You also learned that it is very helpful to use a table of values to estimate a limit, since it shows patterns in how f(x) changes as x approaches a number.
